MEMORANDUM OF UNDERSTANDING

For the Use, Testing and Evaluation of PredictX

Hospital: Brijesh Banger Memorial Hospital
Address: R. C. Vyas Colony, Bhilwara, Rajasthan
Date of Execution: 21/05/2025

1. Purpose

This Memorandum of Understanding (MoU) records the understanding between Brijesh Banger Memorial Hospital and the authorised representative(s) of PredictX, an artificial intelligence-based disease-risk screening system co-developed by Mrityunjay Gupta, a student at Jayshree Periwal International School, Jaipur, Rajasthan.

The purpose of this collaboration is to facilitate the use, testing and evaluation of PredictX within the hospital's existing healthcare infrastructure, alongside established diagnostic procedures.

2. Scope of Collaboration

Under this understanding, the hospital agrees, subject to applicable permissions and medical supervision, to facilitate the use and testing of PredictX for preliminary disease-risk assessment among eligible patients.

PredictX shall be evaluated alongside standard investigations and diagnostic tests, enabling medical professionals to assess its screening outputs in relation to established findings.

The system shall function as a supplementary screening and evaluation tool.

3. Responsibilities

The Hospital shall:

- Facilitate evaluation of PredictX under the supervision of authorised medical personnel.
- Retain responsibility for patient care, diagnostic confirmation and clinical decisions.
- Maintain appropriate records of testing activities and evaluation outcomes.
- Ensure applicable patient consent, confidentiality and institutional requirements are observed.

The PredictX Development Team shall:

- Provide necessary technical assistance for the system's authorised use and evaluation.
- Support evaluation of screening performance against established diagnostic procedures.
- Maintain confidentiality and comply with applicable data-protection and information-security requirements.
- Address identified technical issues during the evaluation period.

4. Data and Evaluation

Patient information shall remain under the hospital's authorised control. Any sharing, processing or analysis of identifiable clinical data shall require an appropriate lawful basis, applicable permissions and mutually agreed safeguards.

Where permitted, de-identified and aggregated evaluation results may be documented for scientific reporting, subject to institutional approval.

5. Acknowledgement and Signatures

The undersigned acknowledge their understanding of the objectives and responsibilities stated herein.
