Letter of Recommendation

To Whom It May Concern,

I'm pleased to recommend Mrityunjay Gupta, who completed a one-month Software Engineering Internship at GrackerAI. During his time with us, he impressed us with his technical skills and professional approach that you rarely see in someone his age.

Mrityunjay built a prompt injection auditing system for our internal AI agents and ran over 500 test cases using 25+ different attack methods. His work directly led to security improvements we've implemented in our systems, including better output filtering and input validation. He showed real talent in software architecture, API integration, and vulnerability analysis.

What stood out most was how quickly he grasped complex concepts and turned them into practical solutions. He asked smart questions, worked independently when needed, and always delivered clean, well-thought-out code. His communication was clear and his work ethic was excellent throughout the internship.

I recommend Mrityunjay for any computer science, cybersecurity, or AI program. He has the technical foundation and problem-solving mindset to succeed in challenging academic environments. Any institution would be lucky to have someone with his combination of talent and dedication.

Feel free to contact me if you need any additional information.

Sincerely,

Deepak Gupta
CEO/Co-Founder
