LETTER OF INTERNSHIP COMPLETION

To Whom It May Concern,

This is to certify that Mrityunjay Gupta successfully completed a six-week hybrid internship with Human Archive from **18 May 2026 to 29 June 2026**, serving as a Business Growth & Machine Learning Data Intern. Notably, Mrityunjay was the youngest intern in our company's history, entrusted with responsibilities spanning industry partnerships, workforce coordination, and technical development for embodied artificial intelligence.

During his internship, Mrityunjay played an important role in expanding Human Archive's real-world data collection network. He managed partnerships with 12 manufacturing facilities and coordinated the onboarding of over 100 workers, helping establish the human-action data collection operations essential to our robotics research. His responsibilities required direct engagement with factory representatives, coordination of participating workers, and an understanding of how everyday manufacturing activities could be translated into valuable training data for robotic systems.

Alongside his business development responsibilities, Mrityunjay contributed substantially to our machine learning data initiatives. He developed custom three-dimensional hand-movement models designed to represent the movements and actions performed by humans during everyday tasks. These models help robotics researchers study human manipulation and train AI systems to learn physical actions from real-world demonstrations. The resulting models formed part of the data products commercially supplied to six AI laboratories.

What made Mrityunjay's contribution particularly valuable was his ability to connect two demanding aspects of our operations: establishing the partnerships needed to collect authentic human-action data and developing technically useful representations of that data for downstream AI training. He demonstrated an understanding that effective embodied AI research depends not only on sophisticated computational models, but also on the quality, diversity, and practical relevance of the human demonstrations used to train them.

Despite being our youngest intern, Mrityunjay demonstrated maturity, technical initiative, and an impressive capacity to take ownership of responsibilities across both commercial and engineering functions. We recommend him without reservation.

Sincerely,

Rushil Agarwal
Director and COO
